

Handling Instructions

- Bova eye preparations in the below bottle are for ophthalmic use. Do not administer by any other route.
- Wear nitrile gloves when handling the product.
- If direct contact is made with the solution, wash the affected area immediately with soapy water.
- Use caution when applying pressure to expel the solution from the bottle.
- Each bottle contains approximately 330 drops.
- The dropper bottle has been designed to dispense each drop at 25-30uL, which is suitable for accurate dosing for an animal.

Step 1

Unscrew the tamper evident band and unscrew the top

Step 2

Put the device upside down and gently squeeze the bottle to deliver a drop

Step 3

Shake off remaining drop before closing the cap of the device
